SCMS2 – Delivery Tracking

A redesign of an existing internal application used to track deliveries. The project focused on modernising the interface while presenting more information clearly without overwhelming users.

- Redesigned the existing interface with a focus on clarity, hierarchy and ease of use.
- Considered how larger amounts of information could be presented without overwhelming users.
- Created a high-fidelity interactive Figma prototype.
- Applied practical knowledge of the existing system and user requirements to inform design decisions.
- Worked between design and development, considering both user experience and technical implementation.

Mi.team – Analytics Platform Redesign

A complete redesign of an existing analytics platform, transforming a cluttered, difficult-to-navigate interface into a modern, intuitive application. The project focused on making complex activity and device data easier to understand while promoting transparency, personalisation and usability.

- Researched competitor products to identify design strengths, weaknesses and opportunities for improvement.
- Redesigned key interfaces using clear visual hierarchy, white-space, colour coding and progressive disclosure to reduce cognitive load.
- Created intuitive dashboards, data visualisations, device management pages and settings interfaces.
- Developed high-fidelity interactive Figma prototypes, refining designs through regular feedback and iteration.
- Considered accessibility, responsive layouts, GDPR requirements and the needs of different users throughout the design process.
- Collaborated with development and marketing teams to maintain consistency between the product experience and its presentation.

Academic UX/UI Project – Level 6 Digital UX

Enzo Speakers – Mobile Application (Scoring a First - 84%)

A mobile application design for a fictional speaker company, using user research and a defined persona to explore how the product could meet the needs of its intended audience.

- Developed a persona and used their requirements to inform design decisions.
- Created wireframes and developed these into a high-fidelity interactive Figma prototype.
- Applied UX principles and usability considerations throughout the design process.
- Evaluated and justified design decisions against the identified user needs.
- Presented the research, design process and final solution through a recorded presentation.
